

Customer Support Ticket System

Objectives

- Create a help desk system for managing customer support requests from submission to resolution.
- Enable support agents to efficiently manage, prioritize, and respond to tickets.
- Improve customer satisfaction through transparent ticket tracking and timely responses.

Deliverables

- A fully functional Customer Support Ticket System.
- Ticket submission form with category, priority, and description.
- Agent dashboard with ticket queue, assignment, and status management.
- Customer portal with real-time ticket tracking and response history.
- SLA tracking and escalation for overdue tickets.

Requirements

- HTML: Structure ticket forms, agent dashboards, and customer portal.
- CSS: Design a clean, professional support interface.
- JavaScript: Handle ticket filtering, real-time status updates, and chat.
- Backend: Manage ticket lifecycle, agent assignments, and notifications.
- Database: Store tickets, agents, customers, responses, and SLA records.

Advanced Features

- Live Chat: Integrate real-time chat for instant support alongside ticket system.
- Knowledge Base: Maintain a searchable FAQ and article database.
- AI Suggestions: Recommend relevant knowledge base articles on ticket submission.
- Canned Responses: Allow agents to use pre-written responses for common issues.
- Multi-Channel Support: Handle tickets from email, chat, and web forms in one place.
- Customer Satisfaction Score (CSAT): Collect ratings after ticket resolution.
- Team Collaboration: Allow multiple agents to collaborate on complex tickets.
- Custom Fields: Add custom ticket fields for industry-specific data.
- Mobile Responsiveness: Accessible for agents and customers on mobile devices.
- Analytics Dashboard: Resolution times, ticket volumes, and agent performance.

- Payment Gateway: Accept payments for premium support plans or one-time paid support sessions via Stripe.
- Usage-Based Billing: Bill enterprise clients based on ticket volume or agent seats each month.
- Auto Invoice: Generate and send itemized invoices to business clients at the end of each billing cycle.
